

TCL Google TV ADB Command Reference

1. Connect to the TV

```
adb connect 192.168.1.3:5555
```

Status: Confirmed working.

2. Check connection

```
adb devices
```

Expected:

```
192.168.1.3:5555 device
```

3. Wake TV

```
adb shell input keyevent 224
```

KEYCODE_WAKEUP. Confirmed working.

4. Go Home

```
adb shell input keyevent HOME
```

or

```
adb shell input keyevent 3
```

Confirmed working.

5. Launch TrueConf

```
adb shell monkey -p com.trueconf.videochat -c  
android.intent.category.LAUNCHER 1
```

Confirmed working.

6. Force-stop TrueConf

```
adb shell am force-stop com.trueconf.videochat
```

Confirmed working.

7. Foreground App

```
adb shell dumpsys activity activities | grep mResumedActivity
```

Shows the currently active application.

8. List Installed Packages

```
adb shell pm list packages
```

Confirmed working.

9. TV Model

```
adb shell getprop ro.product.model
```

Returns: Smart TV Pro.

10. Power State

```
adb shell dumpsys power | grep -E 'Wakefulness|Display Power|mHolding'
```

Observed when TV off:

mWakefulness=Asleep

mHoldingWakeLockSuspendBlocker=true

mHoldingDisplaySuspendBlocker=false

11. Display State

```
adb shell dumpsys display | grep mScreenState
```

Observed:

mScreenState=OFF

12. ADB Health Check

```
adb shell echo alive
```

Returns 'alive' even after TV was switched off for 30 seconds.

Key Findings

- Wireless ADB is available despite no Wireless Debugging menu.
- ADB is reachable on TCP port 5555.
- TV remains reachable over ADB after being turned off (at least for 30 seconds).
- KEYCODE_WAKEUP (224) wakes the display.
- Apps can be launched, force-stopped, and monitored remotely.
- Home screen can be invoked remotely.

Pending Tests

```
adb shell input keyevent 223 (KEYCODE_SLEEP)
```

```
adb shell input keyevent 26 (KEYCODE_POWER)
```

Long-duration standby test (30–60 minutes or overnight) using:

```
adb shell echo alive
```
